Executive Overview

Customer Behaviour & Risk Drivers

Actionable Risk Insights

- ~700 customers (2.3% of the portfolio) have made zero payments against their outstanding balance — this table isolates them by risk and exposure; recommend immediate collections outreach starting with the top 20 combined high-risk/high-exposure accounts.
- High-risk customers carry nearly as much exposure per account as low-risk customers (avg. NT\$0.24M vs. NT\$0.29M), despite representing only ~4% of the customer base — risk is not concentrated in smaller credit lines, so exposure controls need to scale with risk category, not just account size.
- Default rate rises with age and peaks in the 60+ segment, and is highest among High School-educated, Single customers — useful portfolio-monitoring signals, though any policy response should be validated against underwriting/fair-lending guidelines before acting on demographic-adjacent variables.
